

SUMMARY

Seasoned software engineer with **13+ years** of experience in designing **scalable, distributed and reactive** micro-services-based systems for enterprise cloud environments. Currently seeking **senior and staff** roles to drive innovative solutions and deliver robust architecture.

TECHNICAL SKILLS and TOOLS

**Programming:** Java, Kotlin, Python, Typescript, C++ **Scripting:** Shell  
**Back-End Frameworks:** Spring Boot & Webflux, Node, FastAPI **API:** REST, GraphQL (DGS), WebSocket, SSE  
**Databases:** Postgres, MySQL, RDS (AWS), Google BigQuery **Caches:** Redis, Caffeine **Message Bus:** Kafka, RabbitMQ, PubSub(GCP)  
**Deployment:** Docker, Kubernetes, Kong, Istio **Monitoring:** Datadog, Kibana **Build:** Maven, Gradle **Auth:** Keycloak, OAuth  
**Cloud Platform:** AWS (IAM, VPC, S3, CloudFormation), GCP (CloudRun, CloudTask), Terraform **AI Tools:** Vertex AI(Gemini), OpenAI  
**Architecture:** RFC, TechSpec, C4 Diagrams **Code Standards:** Clean Code, DDD, CQRS, Hexagonal Architecture, Event Driven, Reactive

WORK EXPERIENCE

Wayfair LLC (Senior Software Engineer | Tech Lead)

May '22 to Present

- Catalog API Development:**
- Led from design to deployment of high-performance bulk **GraphQL** APIs for Wayfair’s Catalog management using **Java, Kotlin, Kafka** and **Spring Webflux** for consumption by **PIM** vendors (Salsify and CommerceBear) supporting up to **1000** RPS.
  - Integrated **Redis** cache to significantly boost performance and leveraged **Postgres** via Google Cloud SQL.
  - Utilized **Domain Driven Design** and **Hexagonal architecture** for modular, testable, and maintainable systems.
  - Architected isolated **sandbox** environments for GraphQL APIs to enable safe testing, validation and accelerated onboarding.
- Observability & Operational Excellence:**
- Designed a comprehensive **observability** pipeline for reactive **GraphQL** APIs using **Datadog** and **Google BigQuery**.
  - Correlated upstream/downstream metrics and payloads, enabling detailed system health insights and reduced **MTTR**.
  - Built **SLO/SLI dashboards** and **synthetic tests** that were adopted as the **gold standard** across multiple engineering teams.
- Performance Engineering:**
- Reduced downstream service latency by **90%** (from 7s to 300ms) by reengineering the application from **Python** to **Java**.
  - Replaced **static** databases with **in-memory** resource files, implemented a two-tier **Caffeine + Redis** cache, and consolidated service logic to eliminate **redundant** network calls to significantly boost **performance**.
- Architecture & Developer Enablement:**
- Produced **detailed architecture C4 diagrams** and **API flow charts** to enable quick **onboarding** and uncover **design flaws**.
  - Translated Roadmap goals and **OKRs** into **Tech Specs** and **RFCs**, aligning multiple teams and ensuring timely feature delivery.
- Stakeholder Management & Collaboration:**
- Partnered with **Analytics** and **Release Engineering** to deliver production-grade **observability** tooling.
  - Collaborated** with Product, Platform Engineering, and external to align **business** and **performance** goals with **strategic OKRs**.
  - Regularly led **design walkthroughs** and **documentation reviews** to gather feedback, build consensus, and ensure alignment.
- Mentorship & Leadership:**
- Mentored** multiple junior engineers, interns and contractors through **onboarding, design coaching, and code reviews**.
  - Hosted team-wide **knowledge-sharing** sessions on Kotlin, Spring Webflux, and reactive programming principles.
  - Acted as a **technical backstop** and **code quality gatekeeper** across the Catalog APIs workstream.
- AI-Driven Test Automation with Google Gemini:**
- Harnessed **Google Gemini** to auto-generate **GraphQL** API test inputs, adapting on-the-fly to evolving taxonomy requirements.
  - This AI-powered approach accelerated test data creation, improved coverage, and slashed manual preparation effort.

Proofpoint Inc (Senior Software Engineer)

Feb '22 to May'22

- SIEM Integration:**
- Engineered microservice using **Java** and **Spring Boot** to enable **SIEM** integration with the Microsoft Graph Security API.
  - Utilized **ShedLock** to orchestrate reliable, **distributed Cron** jobs for periodic retrieval of malicious file hashes.
  - Implemented an efficient two-tiered caching layer combining **Redis** and **Guava**, reducing redundant API calls and significantly optimizing system **performance**.

Symantec Enterprise (Broadcom Corporation Acquisition) (Staff Software Engineer)

Jan '20 to Dec'21

- Data Loss Prevention Enforce Console:**
- Migrated key features including incident match highlighting and **RBAC** from a legacy system to a robust, **Spring Boot** based on-premises backend, resulting in enhanced policy creation, rule management, and incident response capabilities.
  - Engineered scalable **REST** endpoints and seamlessly integrated **JPA/Hibernate** with an **Oracle** database, ensuring reliable data persistence and efficient backend operations.

Symantec Corporation (Principal Software Engineer)

Jun '14 to Jan '20

- Symantec Information Protection (DRM):**
- Led development of **encryption** features to secure **sensitive files** flagged by a **DLP** engine and intercepted via **CASB**.
  - Designed and developed **REST microservices** utilizing **Spring Boot, JPA/Hibernate** with **Aurora RDS** and **RabbitMQ**.
- Microservice Orchestration & Deployment (AWS):**
- Engineered a **scalable, high-availability** production environment with autoscaling across multiple **Availability Zones**.
  - Configured **CloudWatch** for log streaming and **monitoring** while managing secure access through **VPC** and **IAM**.
  - Orchestrated deployment using **CloudFormation** and executed **Blue-Green upgrades** for minimal downtime.

**Hardware Encryption Support:**

- Enhanced Symantec Whole Disk Encryption (**PGP**) to support hardware encryption on **OPAL** specification drives.
- Implemented **Trusted Computing Group** (TCG) compliant changes in the **Windows kernel**, **UEFI pre-boot** environment, and corresponding user-mode layers using **C++**.

Symantec Corporation (*PGP Encryption Intern*)

Jun’13 to May’14

- Developed a robust utility in **C++** to recover locked disks by utilizing universal keys obtained from the **PGP** Server for systems deployed with golden images on **10000** machines, significantly streamlining restoration and reducing downtime.
- Implemented features in **C++** for the **PGP** Whole Disk Encryption CLI and enhanced **UEFI PreBoot** Authentication support.

Tata Consultancy Services Ltd, Mumbai, India (*Systems Engineer*)

Nov’09 to Aug’12

**64-bit Migration:**

- Migrated critical HP Nonstop **Middleware** products from **ILP32 (32-bit)** to **LP64 (64-bit)** architecture in **C++**.
- Fixed **mission critical** defects for Fortune 500 clients (Daimler, Mercedes-Benz, and Wells Fargo).
